

Cold Hard Fact.

You cannot solve cold weather fuel filter clogging problems by just switching to a winter-grade fuel.

Don't you wish you could promise your customers year-round, trouble free operation? ***You can if you change the way you buy, store and dispense your fuel.***

Even with winter-grade ULSD, bio-fuels and additives, as temperatures go down, water, sterol glucosides, wax and other particulates begin to drop-out of the fuel. These particulates contaminate your storage tanks and greatly increase the probability of clogging filters. The amount and pace of this drop-out differs by fuel type and supplier, but as temperatures plummet, they all eventually exhibit this behavior. Western Petroleum's Yukon GPMSM (gel particulate management system) is a proven, 4-step solution to cold weather gelling that works. Need proof? In the winter of 2009/2010, over 15 million gallons of Yukon B5 biodiesel were dispensed without a single gelling problem.

Want a serious solution to a serious problem? Contact Western Petroleum today and ask how you can become Yukon GPMSM certified. Protect your customers by being part of the solution. **Yukon GPMSM ... The Smart Choice.**

WESTERN PETROLEUM COMPANY

GPMSM is a service mark of Western Petroleum Company
